

Avalanche Transceiver **Interference**

Avalanche rescue is a serious situation and maximum efficiency is crucial. Within close proximity, GoPro cameras, electric gloves, cellular phones and metal objects can seriously interfere with the transmit and receive functions of your avalanche transceiver. Since the overarching goal of any rescue is to minimize the search time, anything that can potentially interfere or lengthen the search time needs to be managed. For your own safety, the following policies apply at Last Frontier Heliskiing:

① MINIMUM DISTANCES

- > The following distances apply for electronic devices regardless if they are ON or OFF and any metal objects that could interfere with the transceiver signal. Minimum distances between object and transceiver.

Send/Transmit: Minimum **20cm / 8in** of separation
Search/Receive: Minimum **50cm / 20in** of separation

② GOPRO POLICY

- > Helmet mounted GoPro or similar cameras are **allowed** during heli-skiing operations
- > Chest mounted GoPro or similar cameras are **prohibited** during heli-skiing operations.
- > Cameras that utilize a WIFI signal and are actively paired to a phone are **prohibited** during heli-skiing operations.

③ ELECTRIC GLOVES POLICY

- › Electric gloves are **prohibited** during the ski program and during avalanche rescue training. Electric gloves will seriously interfere with the transceiver, especially during the search function.

④ CELLULAR PHONES POLICY

- › Cellular phones are **allowed** during the ski day but should be put on airplane mode
- › Minimum distances [Section 1] need to be adhered to

⑤ DRONES

- › The use of drones while skiing and around the lodge is not allowed.

⑥ TOURING BOOTS

- › The use of touring boots is highly discouraged. Recent tests have shown that all makes and models of touring boots have failed release function tests. We recommend using only alpine ski boots with our skis. If you are bringing your own skis, alpine touring pin bindings are also not recommended. See full details [[here](#)].
